The polynucleotides are useful in gene therapy. A composition containing a polyneptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer disgnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY13392 standard; Protein; 463 AA.

New isolated human genes and polypeptides used in, gastrointestinal ulceration e.g. treatment of

Claim 12; Fig 100; 320pp; English.

CC AAX13344-403 represent secreted and transmembrane human proteins.
CC The cDNA sequences are obtained from cDNA libraries, prepared from
CC fetal lung, fetal kidney, fetal brain, fetal livrar and fetal retina.
CC The encoded polypeptides have specific uses based on their homology to
CC known polypeptides, e.g. PRO211 and PRO217 can be used for disorders
CC associated with the preservation and maintenance of gastrointestinal
CC mucosa and the repair of acute and chronic mucosal lesions
CC (e.g. enterocolitis, Zollinger-Fillison syndrome, gastrointestinal
CC ulceration and congenital microvillus atrophy), skin diseases associated
CC with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial
CC cancers such as lung squamous cell carcinoma of the vulva and gilomas),
CC potent effects on cell growth and development, diseases related to
CC growth or survival of nerve cells including Parkinson's disease,
CC for fibromodulin, e.g. for reducing dermal scarring. PRO265 can be used
CC as a target for anti-tumor drugs. PRO333 may be used in the treatment
CC anti-thrombotic agent, PRO287 polypeptides and portions may have
CC therapeutic applications in wound healing and tissue repair; PRO317 can

Claim 1; Page 94-95; 145pp; English.

Human neuron-associated proteins (NEUAP) can be used for for treating or preventing a disorder associated with decreased expression or activity of NEUAP. Antagonists of NEUAP are useful for treating or preventing disorder associated with increased expression or activity of NEUAP. NEUAP or their fragments or derivatives are useful for treating neurological disorder such as epilepsy, ischemic cerebrovascular disease, stroke, cerebral neoplasms, Alzheimer's disease, Pick's disease, Huntington's disease, dementia and parkinson's disease. NEUAPs are also useful for treating other demyelinating diseases, bacterial and viral meningitis, prioniseases including kuru, Creutzfeldt-Jakob disease, nutritional and metabolic diseases of the nervous system, neurosis, other developmental disorders of the central nervous system desorders, other developmental disorders, autonomic nervous system disorders,

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-937-555A-2
